What a sponsor would need to see

If the Ethereal Offering Protocol is to be sponsored by, or a beneficiary of, launchpad capital and the people building in the blockchain space, this is the shelf a reviewer walks along, and what is on it today

Research and self-assessment, not an application. No launchpad, fund or sponsor has been approached. Everything marked "to verify" stays unverified until a person checks it.

Proposal 002 | Status draft, self-assessment | Date 2026-10-29 | For Christopher; later a sponsor

general information | not legal or financial advice

TL;DR

Tip. Five lines, if that's all you read tonight.

1. ***A sponsor reads the record before the pitch.*** *The repos, the changelog, the decision log, the audits, the entity papers and the counsel's opinion are the application; the deck comes after.*
2. ***On the shelf today:*** *an open, dated code base with contracts and a dApp; a public-preview pipeline that keeps private material private; a fleet that commits with attribution; a sister initiative (psychedelic-policy-reform) with a live log; and a lab that already runs a public, point-in-time trading record.*
3. ***Half there:*** *the whitepaper (three sources to reconcile, proposal 001); the contracts review before any testnet; the governance that honours quorum, written but not yet enforced on-chain.*
4. ***Not there yet, and not ours to rush:*** *the entity structure and counsel's written opinion; an audit; a treasury policy; a named steward team with capacity.*
5. ***The framing that fits:*** *a framework and worked example for DAO-governed spiritual and recovery communities, built in public, that others can fork. Sponsorship would fund building at scale with others, not a token sale.*

The shelf

	What a reviewer looks for	Where it stands (Oct 29, 2026)	Status
	A code base with history	`gratitude-token-project` (Hardhat, about 1.9K lines of Solidity across 13 files, localhost only), the dApp, the Docusaurus site, this Astro sidecar; every commit attributed to its agent and session	✅
	Secrets never in the repo	fleet hooks with a secret scan on every commit; allowlist sync so only named paths go public	✅
	A whitepaper that says one thing	three sources that disagree; reconciliation proposed in 001	◐
	Contracts reviewed, then audited	review pencilled before any Sepolia deploy (untrack `dist/`, then an ultrareview); no external audit yet	◐
	Governance that is real	quorum and role-based decisions written in the drafts; not yet enforced by contracts; the changelog is the record	◐
	Entity and counsel	the church's status, a possible foundation, and the securities analysis are questions for Psanctuary's counsel; a consultation brief exists as a draft	⛔

	A treasury policy	multi-signature, categories and reporting sketched in the drafts; nothing adopted	⛔
	People with capacity	one steward and an agent fleet today; trusted servants to be appointed or employed as the community grows	⛔
	A public face that tells the truth	public previews for the dApp and the sites; the lab's Fortuna Terminal as proof the fleet publishes point-in-time records	✅

The order that gets the shelf full

1. Reconcile the whitepaper (proposal 001) and publish the three-tier map.
2. Counsel: entity structure and a written view on the core tier. Only then does the reframed tier get a question each.
3. Contracts review, then testnet, then an audit of the core tier only.
4. Governance on-chain for the core: proposals, quorum, roles, a treasury with reporting.
5. Community feedback and the first trusted servants.
6. Then, and only then, a conversation with a launchpad or sponsor, with this shelf as the application.

Questions to settle before any sponsor conversation

Question	Why it comes first
What is being sponsored: the church's tooling, a foundation's open framework, or a DAO?	A sponsor funds an entity; the drafts offer three options and counsel has not chosen
What does the sponsor receive?	Nothing that looks like an investment contract; grants, services and attribution are the shapes to explore with counsel
Who signs?	The steward team and the roles the governance names; not one person
What is public before the conversation?	Everything on the "ready" rows above; nothing from the private lanes

Decisions log

Date	Decision	By
2026-10-29	The ambition is recorded: a framework and example for DAO-governed communities, sponsored or supported by launchpad capital and others building in the space, to build at scale	Christopher
2026-10-29	No sponsor is approached before the shelf is full; the record is the application	this draft, for Christopher's yes or no
	Everything after this line	Christopher, counsel, the community

▼ **Sources and what we couldn't confirm**

- The state of the code: Alfred's recon of 2026-10-28 and the repos' own pending-tasks files.
- The drafts' entity, treasury and governance sketches: `AGENT-SYNC/created-in-claude-cloud/` (private), unverified.
- Launchpad and sponsor expectations: **general experience, not a survey**; a named programme's criteria are read on its own page before any application.
- Nothing here is legal, tax or financial advice.

Show what is possible, then build it with others.
