Reframe, don't sunset

Reconciling the three whitepapers of the Ethereal Offering Protocol: what the claude.ai drafts kept, what they cut, and a way to keep every idea alive while counsel decides what ships first

A first revision, written the day the drafts landed, before Christopher reconciled them with the real whitepaper and his October 2025 hand edits. Not legal advice. Every "fact" about entities and money in the drafts is unverified until the attorneys say otherwise.

Proposal 001 | Status draft, first revision | Date 2026-10-29 | For Christopher, then Psanctuary

general information | not legal advice

TL;DR

> ***Tip. Five lines, if that's all you read tonight.***

1. **There are three sources, and they disagree.** *The ChatGPT-era whitepaper the Docusaurus site was built from; Christopher's pen-and-paper edits of October 2025 (the only source in his own hand, not yet transcribed); and six claude.ai drafts from October 2026 that reframe some ideas and cut others.*
2. **The drafts fork against themselves.** *One keeps ETHO, a donation-with-token campaign, liquidity pools, a community-governed trading agent and an exchange, all reframed as active stewardship. Another keeps three tokens and removes all of that. The MOU and the timeline assume the tokens the simpler model deletes.*
3. **Christopher's stance: reframe and repurpose, don't sunset.** *Ideas that arrived are kept and shown as what is possible; what ships first is a smaller, counsel-cleared core; the rest waits in a clearly labelled "later, if cleared" tier rather than a deleted section.*
4. **Governance is the thread that holds it:** *proposals and decisions that honour quorum, role-based where a decision needs it, so the community feels involved and the record stays professional. That is true whichever tier a feature sits in.*
5. **The ask of Christopher** *is one afternoon: mark each draft section keep / reframe / later / unsure, transcribe the hand edits, and answer the four questions the chat left open. Agents format everything after that.*

The three sources

	Source	Date	What it is	Standing
	The original whitepaper	2025	ChatGPT-assisted JSON imports; the Docusaurus site was built from them	the published baseline
	The hand edits	Oct 2025	a printed, unbound copy worked through with pen and paper, every page	**the only source in Christopher's own hand; not transcribed**
	The claude.ai drafts	Oct 2026	six files: two whitepaper revisions, simplified tokenomics, an 18-month timeline, a partnership MOU, a legal consultation brief	candidates; unreviewed

---

Where the drafts fork against themselves

Idea	Whitepaper v2 ("reframed DeFi")	Simplified tokenomics ("sacred core")	MOU and timeline

GRAT, earn-only	kept	kept	assumed
Proof of Burn soulbound NFTs	kept	kept	assumed
Role NFTs	implied	kept	assumed
ETHO and the other tokens	kept, with a Howey "active participation" argument	**removed**	MOU allocates 5% of ETHO to PIR
Donation campaign with a token "thank you"	kept (Sacred Offering Campaign)	**removed**	timeline schedules it
Liquidity pools, Treasury Agent trading	kept as "active stewardship"	**removed**	timeline activates the agent in month 15
AMM / exchange	kept as a "Sacred Exchange"	**removed**	
Real estate usage rights	not detailed	kept, church holds title	timeline pilots it
Dual treasury (church fund vs community pool)	proposed	not needed if DeFi is removed	
Marketplace for non-soulbound NFTs		contradicts soulbound-only	timeline, month 16

Two more things a reader should know: the timeline is dated January 2026 to June 2027 and is already ten months stale (read every date as relative); and the entity facts (a 508(c)(1)(a) church, a 501(c)(3) "pending", a legal defense fund, counsel on retainer, a budget of several hundred thousand dollars) are the chat's framing, not verified.

The proposal: three tiers, one document

Instead of choosing between the two drafts, lay every idea on one map with three tiers. Nothing is deleted; everything is placed.

Tier	What goes here	How it is shown
Core, ships first	what both drafts agree on and counsel is most likely to clear: earn-only GRAT, soulbound Proof of Burn and Role NFTs, ceremonial burning to a transparent treasury, DAO governance as church polity, church-held real estate with usage rights	the whitepaper's main body; the first contracts; the first dojo of the dApp
Reframed, pending counsel	the ideas the drafts reframe rather than cut: the donation campaign, stewardship pools, the community-governed treasury agent, member-to-member exchange, the dual treasury	a "What is possible" section, each with the Howey argument the draft makes and the question for counsel beside it; built only after a written opinion
Later, with trusted servants	what needs people and capacity before it needs code: multiple properties, international chapters, an open-source toolkit for other communities, research partnerships	a roadmap tier with no dates, revisited when the community appoints or employs trusted servants to help carry it

The map shows the whole vision to anyone who reads it, which is the point: a framework and an example for others in the blockchain space to see what is possible in a DAO-governed community. It also gives counsel a clean question per idea instead of one large yes-or-no.

Governance as the constant

Whatever tier a feature sits in, the way decisions are made stays the same, and that is what makes the whole thing feel both involving and professional:

- **Proposals honour quorum.** A decision counts when enough of the community has taken part, and the record shows who did. Eventually that is enforced by the contracts themselves, not by goodwill.
- **Role-based where it needs to be.** Treasury movements, property matters and partnerships pass through the roles the simplified model already names (treasury guardians, ministers, flamekeepers), with term limits and removal by vote.
- **Everything on the record.** Proposals, votes, allocations and outcomes are public on-chain and summarised in the Astro sidecar's changelog, so a newcomer or a sponsor can read the history in an afternoon.
- **Capacity decides pace.** Nothing in a later tier moves until there are people to manage it. Weeding happens by the community's feedback, not by a draft's deletion.

What we need from Christopher (one afternoon)

	Step	Output
	Mark each section of the six drafts **keep / reframe / later / unsure**	a marked copy in `AGENT-SYNC/created-in-claude-cloud/`
	Transcribe or dictate the October 2025 hand edits	the third source, in text, in `gratitude-token-project_docs`
	Answer the chat's four questions: the dual treasury; is active participation a strong enough Howey defence; the timeline; which document next	four short paragraphs, dated
	Verify or strike every entity and money fact	a list for the attorneys

Agents then produce the three-tier map, the reconciled outline with a "draft, not legal advice" banner, and the Docusaurus pages.

Decisions log

Date	Decision	By
2026-10-29	The six claude.ai drafts are filed privately in the Astro sidecar as the catalyst; whether they live here or in Docusaurus is settled later	Christopher
2026-10-29	Stance: reframe and repurpose rather than sunset ideas, as long as there is time to build and capacity to manage	Christopher
2026-10-29	Governance that honours quorum, role-based where needed, is the constant across tiers	Christopher
	Which tier each idea lands in	Christopher, with counsel
	Everything after this line	Psanctuary, the community

▼ **Sources and what we couldn't confirm**

- The six drafts: `AGENT-SYNC/created-in-claude-cloud/` (private), from the pinned claude.ai chat "Gratitude token blockchain project review", read in full on 2026-10-29.
- The original whitepaper: `gratitude-token-project_docs` (Docusaurus), built from ChatGPT-era JSON imports.
- The October 2025 hand edits: **not yet transcribed**; everything they change is unknown to this draft.
- Entity status, counsel engagement, budgets and funds named in the drafts: **unverified**; for the attorneys.
- The Howey framework and Pennsylvania RFRA: discussed in the drafts; **not legal advice** here or there.

Giving is receiving. Nothing that arrived is wasted; it is placed.
